

Equipment Return Shipping Instructions

Complete Salimus' Equipment Service Form and include it with the equipment you are returning for calibration or repair. The Equipment Service Form can be downloaded from the Salimus website: <https://envelopetesting.com/product/calibration/>

In order to prevent shipping damage, TEC recommends the following:

Gauges, APTS and Fan Speed Controllers

These items should be shipped in a box with good packing and NOT shipped in an envelope. Padded envelopes do not provide enough protection. Items should be wrapped separately before placed in the box (wrapped in bubble wrap, packing paper, etc.).

Fans

Fans should be returned in the original box with the original padding spacers if possible. When using a different box, make sure it is heavy duty and that the fan is well padded and tightly packed.

Please do NOT pack your items in packing peanuts or shredded paper. If you must use either of these materials, please place your equipment in a plastic bag to prevent peanut/paper infiltration.

Please return your equipment to:

Salimus Building Envelop Testing

Attn: Calibration and Repair

Unit 111, 1st floor, Concorde Tower, Cluster H, Jumeirah Lakes Towers, Dubai, UAE. P.O. Box 45022
